- **What is Detoxification?**

Ans.: Detoxification is the removal of toxic substances (heavy metals, herbicides [glyphosate], insecticides, pesticides, chemicals given off from root canal teeth, chlorine, fluoride, PCBs [Polychlorinated biphenyls], etc.) from the human body.

- **What are the long term effects of being toxic?**

Ans.: All toxic substances stimulate the adrenal glands to pump out over sixty different hormones. One of the key hormones is cortisol, which is a catabolic hormone that literally tears the body down. The following is a list of potential conditions that can result:

- **Chronic inflammation:** common denominator of all degenerative diseases
- **Psychological Issues:** Hearing voices in your head, depression, anxiety, panic attacks, suicide attempts, feelings of insecurity, melancholy, apathy, poor concentration, stuttering, paranoia, mental illness, violent behavior, and more)
- **All forms of Cancer**
- **Diabetes**
- **Insomnia**
- **Ischemic heart disease**
- **Low libido**
- **Digestion problems:** acid reflux, heart burn, diarrhea, constipation,
- **Chronic infections:** suppressed immune system
- **Hypothyroidism:** inability to get pregnant, slow speech, forgetfulness, dizziness, ringing in the ears, heart palpitations, loss of hair, constipation.
- **Arthritis and Rheumatoid arthritis**
- **Autoimmune disease**

- **Disequilibrium:** balance problems
- **Dementia:** memory problems, difficulty handling complex tasks, language, difficulty understanding visual form and space relationships, behavior and personality changes (aggressive, silliness, paranoia, and impulsive)
- **Neurological diseases:**
 - **Alzheimer's disease** (progressive decline in memory, thinking, learning and organizing skills.)
 - **Parkinson's disease:** degenerative brain condition causing parts of your brain to deteriorate. It's best known for causing slowed movements, tremors, loss of muscle control, trouble swallowing, rigidity or stiffness, disturbance of gate, and balance problems.
 - **Multiple sclerosis:** autoimmune disease in which the insulating covers of nerve cells in the brain and spinal cord are damaged. This damage disrupts the ability of parts of the nervous system to transmit signals, resulting in a range of signs and symptoms, including physical, mental, and sometimes psychiatric problems.
 - **Huntington's disease:** lack of coordination and an unsteady gait; mental abilities generally decline into dementia, depression, apathy, and impulsivity at times.
- **High blood pressure**
- **Kidney dysfunction**
- **Macular degeneration**
- **Marfan syndrome:** most prominent of these affect the skeletal, cardiovascular, and ocular systems, but all fibrous connective tissue throughout the body can be affected. Osama Bin Laden. Patients only last for 7 years because of internal bleeding.

- **How did we become toxic?**

Ans.: The answer is simple. By living on this planet, we all become toxic. The following list represents some of the primary ways we become toxic:

- The Environmental Working Group documented with blood samples that the average newborn has 268 chemicals in its blood at birth.
- Vaccinations that started at birth: hepatitis B; today a child between 1 and 18 years of age receives 68 vaccines plus the adjuvants.
- Over 1000 chemicals are introduced into our environment each year.
- The processed foods are loaded with toxic chemicals: high fructose corn syrup (damages your liver -fatty liver), GMOs, Bisphenol A (acts like the hormone estrogen), Phthalates (endocrine disruptors; they leach out from plastics), artificial food colors, nitrates and nitrites (carcinogenic increase risk of cancer).
- Chemtrails: being sprayed in all the NATO countries: aluminum (neurotoxin also destroys foliage, crops and forests; decreases the alkalinity of the soils), strontium, barium. Look up the movie produced by G. Edward Griffin, What in the World are They Spraying.

• **What are the effects of a toxic body?**

Ans.: The effects of a toxic body causes all systems to become dysfunctional:

- **Endocrine disruptor:** upsets the hormone balance
- **Nervous system disruptor:** Increase in Alzheimer disease and other neurologic diseases.
- **Affects the brain:** depression, inability to think and comprehend
- Ultimately a toxic body leads to illness, degeneration, and death.

• **How to remove toxins from the body?**

Ans.: I have developed a six phase system to detox the body to reduce herxheimer reactions. We will be discussing these in detail next week.

- **Phase I - Liver detox:** the liver requires specific nutrients to process the chemicals it pulls out of the blood.
- **Phase II - Open up the avenues of excretion.** There are nine drainage remedies which are tested.

- **Phase III - Remove the heavy metals.** You cannot get rid of infections as long as the body is burdened with heavy metals.
- **Phase IV - Remove chemicals especially glyphosate**
- **Phase V - Remove the infections**
- **Phase VI - Remove trapped vaccines**

- **What tests are performed to diagnose toxins?**

Ans.: CyberScan System which is a sophisticated computerized system from Germany that takes an energetic scan of your palm chakra and then compares a database of over 132,000 electromagnetic signatures of known chemicals, heavy metals, pathogens, diseases, etc. and compares it with your electromagnetic signatures. The software then distills down the results to show the top 2% to 3% of the stressors that are present. By means of broadcasting healing frequencies, the first three months of treatment focuses on detox; the second three months focuses on regeneration of the body.

A second test that I perform is called Quantum testing. By means of divining rods, I am able to diagnose specific toxins in specific areas of the body and then test which food based supplements are the most compatible to remove them. I have a very high success rate in resolving complex issues that have eluded traditional medicine:

- Cancer (lung, melanoma, basal cell, stage IV throat cancer, uterine cancer, osteosarcoma, and breast)
- Hashimoto's disease
- Cardiac sarcoidosis
- Raynaud's disease
- Congestive heart failure
- Trigeminal neuralgia
- Bell's Palsy
- Post-Concussion syndrome
- Chronic migraine headaches

I now turn the program over to Larry Yelin who will be discussing the mental and emotional issues that can affect your life.
