## Energy Medicine: The New Frontier

**Topic:** Learn a simple, natural, affordable solution to reverse: cancer, strokes, chronic pain, autoimmune diseases, tinnitus, vision loss, pancreatitis, infertility, liver cirrhosis, endometriosis, varicose veins, and more that the FDA **BANNED!**

- Learn how this miracle substance works.
- Why the FDA banned this cure all substance.
- Learn how to use this safe, natural miracle.

## **How this miracle substance works**

This miracle substance was known as “the aspirin of the 21st century,” before briefly falling out of favor with the FDA. This substance has a molecular bond with water that is 1.3 times stronger than water’s molecular bond with itself. This unique solvent substitutes for water as it moves through the cell membranes pulling substances through cells that ordinarily would not penetrate them. It has the ability to alter and restore damaged cells by hydrating them, changing their water structure, and increasing cellular permeability—which allows cells to nourish themselves and dispose of wastes more easily. It acts as a carrier solvent like a “Trojan Horse.” By infiltrating the walls of tumors, it can carry substances into the tumor to destroy it. This substance invades and destroys the most metabolically active cancer cells without affecting nearby normal tissue.

This substance can cut through the biofilm or protein shell surrounding cancer cells and carry medications/natural remedies to enable the immune system to attack cancer cells. It is also believed that this substance can decrease the energy level of cancer cells and cause them to become benign.

This substance stimulates various parts of the immune system and scavenges hydroxyl radicals, the most potent of free radicals.

**As a side note:** Kangen water machines which cost anywhere from \$1150 to \$4795 alkalize their water by creating hydroxyl radicals. In my humble opinion, I believe this process is dangerous.

This substance stimulates various parts of the immune system and scavenges hydroxyl radicals, the most potent of free radicals. This may be one of the mechanisms by which this substance interferes with the development of cancer. It may also explain why patients who receive this substance while undergoing either chemotherapy or radiation (both of which generate free radicals in order to kill cancer cells) are far less prone to such side effects as hair loss, nausea and dry mouth. There is also evidence that this substance can protect against radiation damage.

### **What is this miracle substance? It is DMSO (Dimethyl Sulfoxide)**

DMSO is a natural substance; a byproduct of the lumber industry, which supplies it to the pharmaceutical industry for veterinary and human use. In its crude form, this carrier solvent is often used by veterinarians and athletic coaches in the treatment of muscle sprains and various injuries. It promotes healing by increasing the blood supply to the area of the injury. The pure pharmaceutical grade is FDA approved for treatment of interstitial cystitis (bladder inflammation). DMSO is a gentle but powerful

healing substance. There is extensive medical research literature, extending back decades and covering thousands of patients, proving the safety of DMSO uses and also its effectiveness as a cancer treatment.

### **Why isn't DMSO available through most cancer treatment centers?**

Two reasons: Medical bureaucracy and economics. They fear that offering it could make them vulnerable to attack (AMA, FDA, and Big Pharma). Also, institutions cannot bill patients' insurance companies for DMSO treatments. The claims would only be denied, because, even with the evidence that DMSO is an effective cancer treatment, the FDA never approved it for that purpose. It must be prescribed "off-label." The information on effective, natural, non-toxic alternative cancer treatments is "out there," but it is not widely available.

Sadly, many mainstream physicians tend to be automatically "down" on any alternative treatment they are not "up on," and are only up on treatment information brought to them by visiting drug reps, or presented at seminars hosted by Big Pharma. The pharmaceutical industry also holds powerful influence over medical school curriculums. Most mainstream oncologists are deeply invested in conventional medicine.

## **Why the FDA banned this cure all substance.**

The answer is simple. Because it would dramatically reduce the revenue stream to Big Pharma. In reality, the FDA functions as their police force for Big Pharma. Verification of this was portrayed in the book, *Politics in Healing*, By Daniel Haley. The author presented 123 major natural breakthrough therapies for cancer that were all squashed by the AMA, Big Pharma, and the FDA.

## **Benefits of DMSO**

- DMSO has an antiseptic effect that is harmful to microorganisms: herpes, shingles; it is also effective against antibiotic resistant bacteria (tuberculosis).
- DMSO is non-toxic and 7 times safer than aspirin.
- It can deliver antimicrobial agents to areas that are typically difficult to reach (e.g., deep in a bone) and also directly to regions that would otherwise require a systemic application of the medication.
- It can increase circulation to many parts of the body, something which is often critical for resolving illnesses (as a healthy blood supply allows the immune system to enter and heal diseased areas). Likewise, pretreatment with DMSO has been shown to increase the immune system's ability to resist a subsequent infection.
- It can also protect cells from the harmful effects of bacterial toxins and can mitigate the toxicity of antimicrobial agents taken for a prolonged period.

- **Sinusitis** — DMSO helps open blocked nostrils quickly by reducing swelling and promoting tissue healing. Studies have shown DMSO significantly alleviates sinusitis symptoms, including one 1967 study where most patients had excellent results. It also enhances the effectiveness of antibiotics in treating rhinoscleroma, a rare nasal infection.
- **Dentistry** — DMSO is used in dentistry as a mouthwash, relieving gum pain and preventing bleeding. It can alleviate toothache pain and reduce swelling after dental procedures. Dentists have found it effective for treating infections and saving loose teeth from periodontitis. Many studies show DMSO helps improve gum health, treat pulpitis, and accelerate healing after tooth extractions.
- **Meningitis**
- **Osteomyelitis**
- **Cancer**
- **Autoimmune diseases**
- **Fungal Infections**
- **Parasites**

## **Are there any side effects associated with DMSO treatment?**

A few patients have reported a mild headache or a spell of chills. This is rare, and disappears when the IV drip rate is slowed. DMSO has a slight odor like garlic and oysters. This fades away within two days after the final treatment. DMSO is gentle and non-toxic. It does not ordinarily cause nausea and vomiting, nor does it routinely destroy healthy tissue or blood cells, unlike

standard chemo. It won't cause anemia, except in cases where disease progression has damaged the pancreas or gallbladder, or in cases where prior standard chemotherapy and/or disease progression has damaged the bone marrow's ability to regenerate replacement red blood cells. When this side effect anemia arises in a patient receiving DMSO it can be offset with a blood transfusion, or the patient may take Ferrofood and chlorophyll complex both are from Standard Process Labs. Despite occasional anemia, DMSO has none of the miserable side effects common to most standard chemotherapy agents. Research indicates that it protects against common side effects of standard chemo and radiation. It also improves circulation, thus protecting against blood clot formation; which is a risk of surgery and a common complication of advancing malignancy.

### **How to use this safe, natural miracle**

A very few people with a weak liver may react to DMSO. First, test for DMSO allergy by rubbing a drop of DMSO to a clean and dried arm allowing it to soak for 15 minutes. Watch for pain in the liver over the next 24 hours. If you have pain in the liver area avoid using DMSO and improve liver function before using it. Cleanse your liver (milk thistle, glutathione, curcumin, SOD, and omega 6 oil) and retest for DMSO allergy. If there is no pain, then DMSO is safe to use.

DMSO is available online. You want to purchase the 99.9% pharmaceutical grade (pure grade). It must be diluted with **distilled water**. My recommendation would be to start with a 50% dilution to avoid irritation to the skin; that is half distilled water and half DMSO. You can apply it directly to the skin over an area of pain, organ dysfunction, keloid scars, shingles, etc.

**Note of precaution:** Use gloves when applying DMSO to the skin to avoid temporary skin wrinkling on the palm.

You can also mix it with oil of magnesia to calm down muscle spasms. DMSO is a carrier. That is it will transfer any substance **unchanged** into the tissue.

**Oral administration:** Less is more

Need pharmaceutical grade DMSO (Pharma DMSO - .2 un this product is for IV and oral usage); you can put 4 to 6 drops into tea at room temperature. Another good source is a company called DMSO (<https://dmsocom/collections/all>)

I strongly recommend that you read Dr. Morton Walker's book, *DMSO - Nature's Healer*.
